**Declaration of no risk for the  
application of KLEIBERIT KLEBIT 303.0, KLEBIT 303.2  
for products which have contact with foods**

Dear Sirs,

KLEBIT 303.0 and KLEBIT 303.2 are adhesive systems of water-based polymeric vinyl-acetate (PVAc).

The adhesives contain in the absolute cured situation no ingredients, which require any labelling at the final product in accordance to European regulations for dangerous chemicals. Actual European directives imply listings about chemical substances with maximum concentrations which are allowed in plastic materials and articles intended to come into contact with foodstuffs, or which are intended for the construction of packagings for foods. The directive (2002/72/EC "plastic materials and articles ...") advises explicitly that adhesives and adhesion promoters are not regarded.

Nevertheless these products may be used for food-contact-articles.

The application for production of food packagings which are intended to permanent direct contact with food, especially liquid or fatty products, furthermore investigations have to be done about the transfer of substances out of the packaging into the filling ("migration") to check the interaction with taste and smell.

Kindly Regards

**KLEB CHEMIE**
